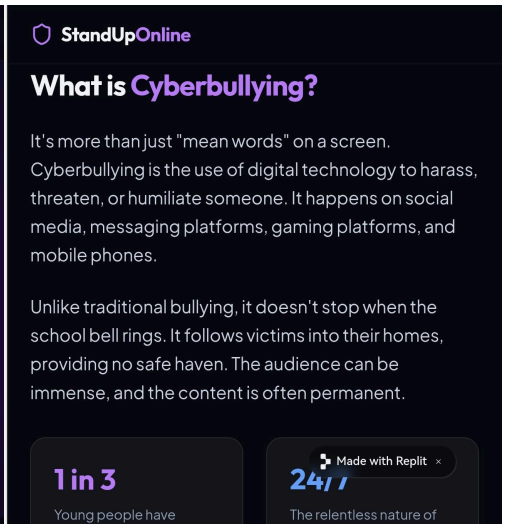
Project Option: Option C (Passion/Advocacy page)
Advocacy Topic: Stop Cyberbullying

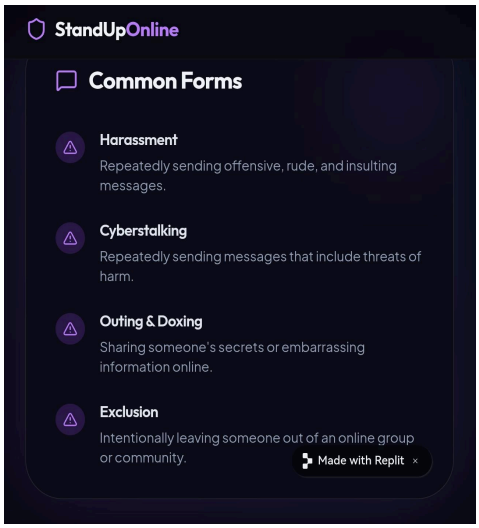
Initial prompt:
Create a modern, one-page advocacy website titled "Stand Up Online: Stop Cyberbullying."
The website should focus on raising awareness about cyberbullying and encouraging respectful online behavior.

Include these sections:
1. Hero section with a strong headline, short description, and a call-to-action button that says "Take the Pledge"
2. About the Issue section explaining what cyberbullying is and who it affects
3. Why It Matters section with 3 key points: Mental Health, School/Work Impact, and Online Safety
4. Warning Signs section with short cards or boxes listing signs that someone may be experiencing cyberbullying
5. How to Help section with practical advice for students and social media users
6. Call-to-Action section encouraging visitors to speak up, report abuse, and support others
7. Contact/Footer section with a short advocacy message

Design requirements:
- Use a clean, modern, and responsive one-page layout
- Use a dark blue and purple color scheme with white text
- Add soft gradients, rounded corners, and subtle hover effects
- Make the site visually appealing and mobile responsive
- Use HTML, CSS, and JavaScript only
- Add simple icons or visual elements where appropriate
- Include smooth scrolling navigation at the top

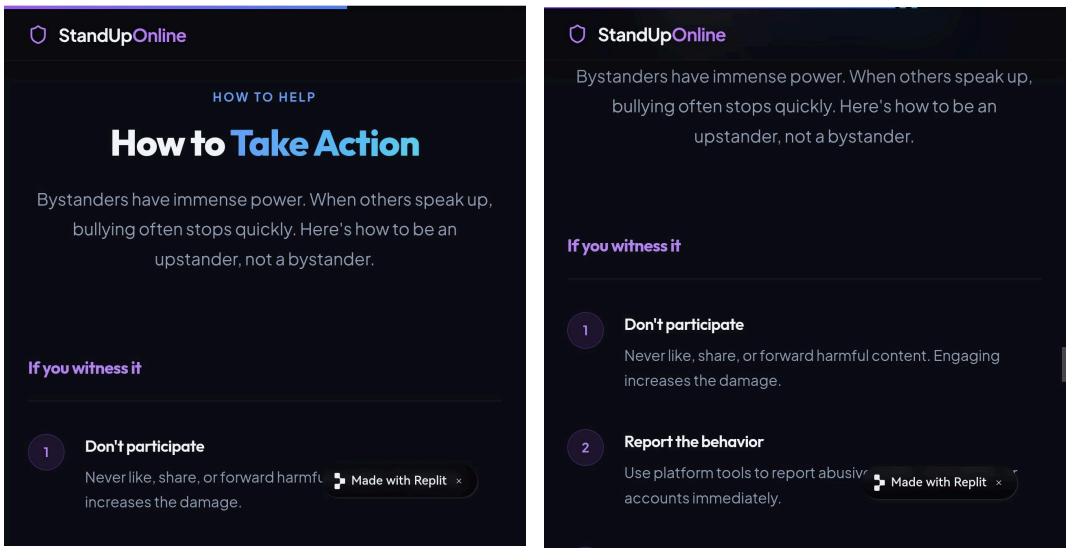
Screenshots of Initial Prompt:





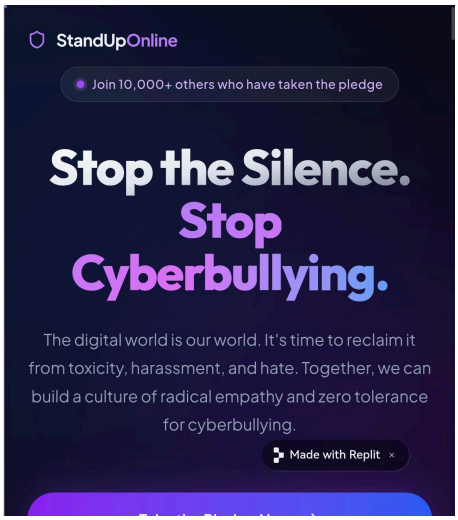
Refinement 1: Improve the website by adding a scroll progress bar at the top of the page. Also improve spacing, typography, and button styling to make the page look more polished and professional.

Screenshot of Refinement 1



Refinement 2: Add subtle animations to the website. Make the sections fade in smoothly while scrolling, and make the final call-to-action section slightly zoom in or stand out when it comes into view.

Screenshot of Refinement 2



Refinement 3: Add a stronger visual advocacy feel to the site by including a statistics section with 3 simple data cards about cyberbullying, and improve the navigation bar so it stays fixed at the top while scrolling.

Reflection:

The initial prompt worked well because it clearly described the topic, required sections, design style, and layout. Replit was able to generate a complete one-page advocacy website with a modern look and responsive structure.

Only small adjustments were needed, such as checking spacing, testing the animations, and making sure the text remained readable on all sections. Most of the layout and styling were already usable after generation.

I learned that detailed prompts produce better results, especially when they include the page sections, design theme, colors, and technical requirements. I also learned that refinement prompts work best when they focus on one improvement at a time, such as animations, spacing, or navigation
